

MobileLock Device Setup

Charging the Device:

Important: The unit **MUST** be connected to a power source to begin the activation process. The internal battery is not fully charged when shipped. The battery will take up to 8 hours to charge completely. Some batteries perform best after several full charge/discharge cycles.

Caution: Use **ONLY** DeWalt power supplies marked for use with this product. Other supplies may damage the product.

1. Plug other end of the adapter into the appropriate electrical outlet.
2. Open door to charging port.
3. Insert adapter with arrow face up

The MobileLock unit will beep to confirm that the unit is connected to power. You can safely leave the adapter connected to the MobileLock after charging is complete. This will not damage the battery.

Note: There is no battery level indicator on the MobileLock unit. This information is available through the website.

ACTIVATE:

(Important: The alarm is non-functional until the notification service is activated. Be sure the following necessary information is available prior to proceeding.)

1. Electronic serial number (ESN) on the back to the MobileLock Unit.
2. Credit Card information.
3. Notification phone numbers and/or e-mail address(es).

The unit **MUST** be connected to power when the service is activated.

Please call RMT Technical Support with the above information, Monday through Friday, 8:00 am to 5:00 pm (Mountain Time) at:
